

| SIMB-KMB President Message

Congratulations from SIMB!

On behalf of the Society for Industrial Microbiology and Biotechnology, I am deeply honored to extend our sincere congratulations and warm wishes to the Korean Society for Microbiology and Biotechnology on their 50th Anniversary!

KMB now has a half-century of service to the microbiology and biotechnology community, and its activities have advanced our scientific community while improving the lives and health of people throughout the world by nurturing excellence in research, publications, scientific meetings, workforce development, and technological progress.

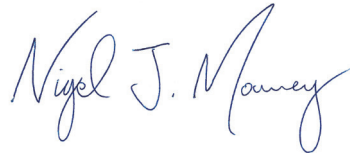

Both of our societies see our common role in facilitating, advancing, and supporting scientific progress within microbiology and biotechnology, fostering interactions between disciplines, sectors, and scientists at all levels, aiding in developing a bioeconomy, and being ambassadors to the public in our fields. SIMB greatly values the relationship we have developed with KMB over the years.

We especially value the many experiences our members have been able to share through scientific visits, writing, and exchanges, and we look forward to more opportunities to collaborate in international meetings. Along with several of my fellow SIMB Board

of Directors members, I also look forward to attending and participating in the KMB Conference later this year.

SIMB's Officers, Directors, and Membership all salute your accomplishments and look forward to working together in the many years ahead!

Sincerely

A handwritten signature in blue ink that reads "Nigel J. Mouncey". The signature is written in a cursive, flowing style.

Dr. Nigel J. Mouncey

President, Society for Industrial Microbiology and Biotechnology
